2  
3 **Effects of soil management practices on the abundance, biomass and diversity of soil**  
4 **macrofauna in the province of Berkane, North East region of Morocco**

7 **Table S1**

8 The total number (ind.m<sup>2</sup>) of individuals of soil macrofauna community collected in the sugar  
9 beet fields under the two agricultural systems (n=15 for each farming practice).

	Organic		Conventional	
	TSBF	Barber	TSBF	Barber
<b>Insecta</b>				
<i>Calosoma sycophanta</i> (Linnaeus, 1758)	0	8	0	0
<i>Paranchus albipes</i> (Fabricius, 1792)	4	4	0	0
<i>Abacetus (Astigis) salzmanni</i> (Germar, 1824)	0	4	4	0
<i>Hippodamia variegata</i> (Goeze, 1777)	4	8	0	4
<i>Coccinella septempunctata</i> Linnaeus, 1758	4	0	0	0
<i>Sericotrupes niger</i> (Marsham, 1802)	16	0	0	0
<i>Silpha olivieri</i> Bedel, 1887	12	0	4	0
<i>Agriotes Eschscholtz</i> , 1829	4	0	0	0
<i>Cassida vittata</i> Villiers, 1789	20	16	8	4
<i>Pycnoscelus surinamensis</i> (Linnaeus, 1758)	0	4	0	4
<i>Polistes dominula</i> (Christ, 1791)	0	8	0	4
<i>Andrena Fabricius</i> , 1775	0	12	0	0
<i>Heteracris annulosa</i> Walker, 1870	12	0	4	0
<i>Aiolopus strepens</i> (Latreille, 1804)	0	0	0	4
<i>Gryllus bimaculatus</i> De Geer, 1773	8	0	4	0
<i>Lepisma saccharinum</i> Linnaeus, 1758	24	4	12	12
<b>Gastropoda</b>				
<i>Leonia mammillaris</i> (Lamarck, 1822)	4	4	0	0
<i>Otala lactea</i> (O.F. Müller, 1774)	16	0	0	4
<i>Eobania vermiculata</i> (O.F. Müller, 1774)	8	0	4	0
<i>Subulina octona</i> (Bruguière, 1789)	48	0	16	8
<b>Diplopoda</b>				
<i>Blaniulus guttulatus</i> (Fabricius, 1798)	28	4	16	0
<i>Paradoxosomatidae</i> sp.	8	4	0	4
<b>Oligochaeta</b>				
<i>Aporrectodea rosea</i> (Savigny, 1826)	56	0	32	0
<i>Lumbricus terrestris</i> Linnaeus, 1758	60	0	28	0
<i>Aporrectodea caliginosa</i> (Savigny, 1826)	84	0	27	0
<b>Isopoda</b>				
<i>Armadillo officinalis</i> Duméril, 1816	152	4	52	4
<i>Porcellio laevis</i> Latreille, 1804	108	8	20	12

**Table S2:** Habitats variables (mean  $\pm$  SE) under two soil agricultural systems (n=15 for each farming practice). The mean value of variables was calculated from the average of values from all site's simples (n=15 of each farming practice). The different number shown in bold are significantly different at  $P < 0.05$ . pH: potential of hydrogen. OM: organic matter. CEC: cation exchange capacity. CE: electrical conductivity. Sgwc: soil gravimetric water content. Lgwc: Litter gravimetric water content.

Habitats variables	Farming system (mean $\pm$ standard error)		
	Organic	Conventional	<i>p</i> -value
<b>pH</b>	7.13 $\pm$ 0.02	6.18 $\pm$ 0.24	<b>0.001</b>
<b>Potassium</b>	0.84 $\pm$ 0.05	0.55 $\pm$ 0.06	<b>0.001</b>
<b>Phosphorus</b>	67.50 $\pm$ 5.14	64.01 $\pm$ 6.46	0.675
<b>Sodium</b>	0.61 $\pm$ 0.06	0.67 $\pm$ 0.05	0.484
<b>OM</b>	2.07 $\pm$ 0.33	1.53 $\pm$ 0.14	0.151
<b>CE</b>	0.48 $\pm$ 0.06	0.35 $\pm$ 0.04	0.092
<b>CEC</b>	22.44 $\pm$ 2.03	18.89 $\pm$ 1.26	0.148
<b>Weed biomass</b>	36.74 $\pm$ 1.05	17.02 $\pm$ 1.92	<b>0.000</b>
<b>Litter mass</b>	18.32 $\pm$ 1.34	12.72 $\pm$ 1.64	<b>0.014</b>
<b>Lgwc</b>	27.05 $\pm$ 2.69	16.43 $\pm$ 2.23	<b>0.005</b>
<b>Sgwc</b>	5.12 $\pm$ 0.536	6.20 $\pm$ 0.89	0.307

**Fig. S1**

Results of redundancy analysis (RDA) of soil macroinvertebrates in association with litter and soil properties across the sugar beet in two agricultural systems. The blue dots represent a soil sample. pH: potential of hydrogen. OM: organic matter. CEC: cation exchange capacity. CE: electrical conductivity. Sgwc: soil gravimetric water content. Lgwc: Litter gravimetric water content.
